## INTRODUCTION

### INTRODUCTION

---

#### **WELCOME to soUNdtext**

You have just downloaded a most powerful tool for composition and performance. The *soUNdtext* word processor represents the latest in the word processing technology. *soUNdtext* has been designed with the idea of giving better *soUND* to your text, and better control of it, than has previously been available in a word processor.

*soUNdtext* generates the *soUNds* of real text. Actual voices have been digitized, stored as *soUNd*fonts, and are available at the drag of a file. *soUNd*fonts can be recorded by anyone, stored as a *soUNd*font folder, and played at an infinitude of speeds, rhythms, and texts—in short, any *soUNdtext* combination that you can imagine you can create with *soUNdtext*. And after you've started making *soUNd*texts you can save them for future use.

With *soUNdtext* you can record your creations: click **REC FOLDER**, name your file, then click **REC** to Record your *soUNd*texts. But there's more to it than that. There are features incorporated into *soUNdtext* that give you more control over your *soUND* and text than a typical word processor allows. We recommend that you familiarize yourself with these features in order to get the most out of your *soUNdtext*.

*soUNdtext* can make most any *soUNdtext* that a human *soUNd*texter can create. In fact, this sonic and textual flexibility of *soUNdtext* creates a new dilemma for the user: exactly **WHAT** makes a good sound, text, or *soUNdtext*? It is not within the scope of this manual to try to answer this question, but if you're not a *soUNd*texter already, we strongly suggest spending some time reading, listening to, and studying the rhythms of your favorite *soUNds*, texts, and *soUNd*texts. Listen to where the words are and where they're **NOT**, where the accents are, when the beat is pushed or swung. If your word processor *soUNds* cold and robot-like, it's because you've programmed it that way. It takes a good sense of *soUND* and text to create *soUNd*texts that really breathe.

Experiment! You'll never know what you'll discover.

## GETTING AROUND

### GETTING AROUND

---

#### SETUP

Prepare *soUNDtext* for operation:

1. Open the program
2. Drag all VOLUME bars to the top
3. Click and type "1" into each *soUND PITCH BOX*
4. Drag *soUNDfont* folders into *soUNDfont DROP BOXES*
5. Click the *MASTER soUND* button

#### KEYBOARD

After you've set up *soUNDtext*:

1. Click the *KEYBOARD ACCESS BOX*
2. Start hand-typing your *soUNDtext*

Note: **Shift** is fully functional

#### TEXT BOX

After you've set up *soUNDtext*:

1. Type or paste text into the *TEXT BOXES*

To hear *TEXT BOX soUND*:

1. Click the *TEXT INPUT* button above the *TEXT BOX* you want to hear
2. Click the *LEFT (L)* or *RIGHT (R) CONTROL BOX* in the center control panel
3. Click the *soUND OUT* button (above the *MASTER soUND*)

### TEXT BOX cont.

#### Looping

A sample of typed text can be looped by copying and repeatedly pasting it.

#### Muting

TEXT BOX soUND can be muted by clicking the L or R CONTROL BOX off.

X = on

Blank = off

#### Un-Muting

To un-mute a TEXT BOX:

1. Re-click the L or R CONTROL BOX
2. Click the soUND OUT button

### soUNDFonts

soUNDFont comes with the following soUNDFonts found in the soUNDFont folder:

**D-fault** / Tom Comitta

**U Q Y** / Samantha Boudrot and ukulele

**Cats and Frogs** / Cats and Frogs

**Watermark** / Tom Comitta's mouth

#### Tuning

The pitch of each voice can be tuned by adjusting the soUND PITCH controls located beside and below the TEXT BOXES and KEYBOARD ACCESS BOX:

0 and below = stopped

.01 to .99 = low

1 = original

1.01 and up = high

#### Changing soUNDFonts

soUNDFonts can be changed by simply dropping a different soUNDFont folder into the DROP BOX below the intended TEXT BOX or KEYBOARD ACCESS BOX.

**soUNDFonts cont.**

**Making a soUNDFont**

See the "MAKING A soUNDFont" section for an explanation of how to create your own soUNDFont.

**RECORDING**

To record your soUNDFonts live:

1. Click the REC FOLDER button
2. Choose your soUNDFont file destination and name the soUNDFont file
3. Click the REC I/O box to start recording

X = start

Blank = stop

Note: You can simultaneously record soUNDFont text from the KEYBOARD and both TEXT BOXES.

**RESET**

To reset text inputted into the TEXT BOXES:

1. Click the RESET button in the bottom right-hand corner

**TROUBLESHOOTING**

See the "TROUBLESHOOTING" section for problems with your soUNDFont, text, or soUNDFonts.

---

## GETTING STARTED

### GETTING STARTED

---

#### **soUNDScores**

Now that you've found your way around, here are some introductory soUNDScores to get you started:

1. Select a soUNDFont by dragging a soUNDFont folder into the intended DROP BOX
2. Hand-type, copy and paste, loop, mash-up, edit, and erase these texts and more—write your own!

Note: If you are reading this manual as a PDF you can literally select text found here, copy, and paste them into a soUNDFont TEXTBOX.

For consideration in a soUNDScore anthology, email your own scores to [contact@soundundtext.com](mailto:contact@soundundtext.com).

## MAKING A *soUNDFont*

### MAKING A *soUNDFont*

---

#### INTRO

Making your own *soUNDFont* is easier than it may seem. All you'll need is a way to record and edit digital sound. But first, here's some foundational information to get you started:

A ***soUNDFont*** is a collection of 95 *soUND* files that *soUNDFont* reads to translate these visual characters into *soUND* characters.

These 95 *soUND* files are contained in a *soUNDFont* folder.

#### Behind the Scenes

The *soUNDFont* program uses a simple system to translate visual characters into *soUND* characters:

1. Each character you input into the program, either in the TEXT BOXES or KEYBOARD, is read as an ASCII number (ASCII = American Standard Code for Information Interchange). For example, "a" is read as "97" and "A" as "65".

2. The program assigns each ASCII number to a *soUND* file that is then played aloud. For example, "97" becomes "66.aif" and "65" becomes "34.aif".

By using the *soUNDFont* key on page 35, you will be able to organize this translation yourself. Note that the ASCII number is not included in the key—*soUNDFont* takes care of this for you.

#### ***soUNDFont* PREP**

To make a *soUNDFont*, you first need to conceptualize the dynamics of your font:

Will it attempt to mimic or ignore the visual characters? Will it clarify or confuse the language? Will you use original or found *soUND*? Will it be bold? Italic? Will it have a serif? What is a *soUND* serif? And so on.

### MAKE A soUNdfont

Once you've conceptualized your soUNdfont, follow these steps to create it:

1. Record or collect the soUND via field recorder, Internet download, microphone + soUND recording program (like ProTools) and other means
2. Compile a 95-file soUNdfont folder using the soUNdfont key
3. Test your soUNdfont by dragging the entire 95-file soUNdfont folder into a DROP BOX in soUNDtext
4. Make any necessary changes to the soUNdfont files and folder
5. Make soUNDtexts with your very own soUNdfont!
6. Share your soUNdfonts by emailing [contact@soundundtext.com](mailto:contact@soundundtext.com)

Note: For your soUNdfont to "line up" correctly with the keyboard, it is imperative that you follow the soUNdfont key on the opposite page.

### soUNdfont KEY

The soUNdfont key found opposite this page will assist you in compiling a soUNdfont folder.

How to read the soUNdfont key:

The "Character" column contains every visual character in the standard ASCII range (the entire English keyboard).

The "File Name" column contains the names you need to give your soUND files to ensure your soUNdfont lines up with the visual characters as you have intended.

The "Your soUND" column is left blank for your personal note-taking.

Note: To play properly, your soUNdfont folder should contain all 95 files with the correct File Names.

## soUNDFont key

| <u>Character</u> | <u>File Name</u> | <u>Your soUND</u> |
|------------------|------------------|-------------------|
| Space            | 01.aif           |                   |
| !                | 02.aif           |                   |
| "                | 03.aif           |                   |
| #                | 04.aif           |                   |
| \$               | 05.aif           |                   |
| %                | 06.aif           |                   |

# TROUBLESHOOTING

## TROUBLESHOOTING

---

### soUND

#### Global

If you cannot hear any soUND, make sure:

1. You have read the "GETTING AROUND" section
2. The MASTER soUND is on (Blue = on)
3. The L or R CONTROL BOX or KEYBOARD ACCESS BOX is clicked on (X = on)

If you still cannot hear any soUND, make sure:

1. The soUND PITCH is anything above "0"
2. The VOLUME is high enough
3. You've dropped a soUNDfont into the DROP BOX

#### KEYBOARD

If you cannot hear KEYBOARD soUND, make sure you're clicked outside of the TEXT BOXES.

### TEXT

#### TEXT BOXES

If certain texts stop while playing, the reasons could be:

1. You've input characters that soUNDtext cannot read
  - 1.a. This can be a problem sometimes if you copy and past text from other programs because different programs format text in different ways (For example, a single quotation mark from Microsoft Word is not read by soUNDtext because Word's default quotation mark falls outside of soUNDtext's ASCII range)
2. You have inputted a long strain of numbers without any breaks

To get your TEXT moving again click and double click the soUND OUT button (above the MASTER soUND).

**soUNDFonts**

If you have made a soUNDFont folder and it does not “line up” correctly with your keyboard, make sure:

1. The first nine files are labeled with zeroes in front. For example, “01.aif” and “09.aif” instead of “1.aif” and “9.aif”
2. Your soUNDFont files correspond to their visual, textual component: the keys of the keyboard

Use the soUNDFont key in the “MAKING A soUNDFont” section to organize your soUNDFont file.

**WHEN IN DOUBT**

Restart:

1. Close *soUNDFont*
2. Open it again
